## Jbl link music smart speaker setup

A volume above 80 decibels can be harmful to hearing. If the volume exceeds 120 decibels, there may even be direct damage. The risk of hearing damage depends on the listening frequency and duration. Page 2A volume above 80 decibels can be harmful to hearing. If the volume exceeds 120 decibels, there may even be direct damage. If the volume exceeds 120 decibels, there may even be direct damage. The risk of hearing damage depends on the listening frequency and duration. The JBL Link Music is a smart speaker in both design and market positioning. It's a great value for the person who doesn't want to pay much for a good sounding smart speaker. Be warned, however; JBL's app is clunky and startup can be slow. If you give, you get. The Link Music is the entry level model in JBL's smart speaker line, but does little to detract from sonic performance. Especially ripe for outdoor placement, this little thing adheres to classic JBL signature sound forms: think warm, bright and forward. And it delivers the goods in an evenly distributed 360-degree pattern, thanks to a downward-firing, high-excursion 2.5-inch round driver powered by a 20-watt digital amplifier with digital signal processing, and two oval passive radiators to the left and right. With only one active driver, the output of the speaker is strictly mono. While a combo punch would probably sound superb, you can't pair two links for stereo. This review is part of Techhive's coverage of the best smart speakers, where you can find reviews of competing products, plus a buyer's guide to the features you should consider when shopping. Jonathan Takiff/IDG The JBL Link Music (left) is about the same size as the recently discontinued Google Home (right), but it sounds significantly better. Step back a few feet from the Link and the sound field really opens up to fill the room, with special zing and balance when cranked up to a medium-loud level. The auditory presentation isn't as phat-sounding as a Sonos One or Bose Home Speaker 300, but at less than half the \$200 price of those rivals, it comes close enough for pleasant rock, folk, jazz, hip hop, and even hoity-toity classical music entertainment. JBL's typical midrange bump pushes vocals and throaty brass soloists forward. Citizen Cope's raprocking political rant Contact actually hit home with better clarity on the Link Music than on a Sonos One, and he emoted almost as articulately on the JBL as on the brightly barking Bose Home Speaker 300. Playing the ultimate (106-track) Bruce Springsteen concert set The Live Series Collection (newly discovered on Napster), I was again and again by how much I felt (and miss) Clarence Clemons' in-your-face concert saxophone wailing. There is also enough bottom-end extension (up to 60Hz) in a Link Music to leave the space swinging on a one pop thumper like Dua Lipa's Hallucinate, found on a Spotify fresh hits list. Jonathan Takiff / IDG Just want to use voice commands, the JBL Link Music has minimal physical control. Now it is regularly discounted to \$79.95 (down from the original \$119.95 msrp), this mighty mite also ticks a bunch of feature boxes that you might hope for in a smart speaker. Connect wirelessly to a home network via dual-band Wi-Fi (802.11ac, but no Ethernet port), a JBL Link Music runs on the Google Home platform, gets directions from an iOS 11.0+ or Android OS 5.0+ app and from Google Assistant-supported voice commands. So, it's designed to do a lot more than draw in music, internet radio, news and podcasts. You also ask the Google Assistant to serve a recipe, answer a burning question; or command the lights, thermostats, window shades, and door locks in your smart home to do their thing. The speaker design is non-controversial, blending in with any décor. It is a boxy but rounded-on-the-corners casing measuring 4.1 inches in diameter by 5.3 inches high, wrapped in acoustically neutral black or gray textured speaker cloth. A row of LEDs flashing in front when you wake up the thing with a Hey Google command flush plus/minus buttons on the rubbery top of the speaker controlling the volume, while a serious, center-mounted Google Assistant button controls playback and alarms and timers. A rubber bottom kept this thing from crawling over the counter, even when the Springsteen crew was in soul-shaking, earth-quivering revival mode at The Detroit Medley and Higher and Higher. At the rear, a small panel keeps Bluetooth connectivity and microphone on/off switches and the power line connector, the latter mounted about an inch from the bottom of the speaker. That placement isn't as clean and neat as an underside power port would be, but the product designers have managed to pack all the electric guts into the Link Music cabinet, so there's no clumsy power wart cluttering the other side of the flat line cable where it plugs into an outlet. Hoping to play the battery? Not for this price. Jonathan Takiff/IDG Better hope you don't need to mute the JBL Link Music microphones in a hurry, which button is on the back of the device. The Google Home app must be installed and an account set up on your smartphone or tablet to get the show going. You will also be kindly asked to muttering a few sentences into the speaker's two top-mounted pinhole microphones so that the Link Music can then understand and respond to you personally. Up to six user votes can be recorded individually. If you've already done this with other smart google assistant speakers, you don't repeat yourself. Despite bluetooth connectivity, the Link Music has no speaker capabilities. In addition to music-playing tasks, Google Home also identified and searched for the Link Music speaker to connect to compatible devices it spotted on my home network (kinda creepy), including a Schlage smart smart lock and a Honeywell smart thermostat. Once done, it's ripe and ready to have a wake up or I'm home mission, with preset (or user custom) command strings that say, light up Philips Hue lights as well as turn on the radio news. Parental controls can also be imposed - automatically shutting down the sound - when it recognizes children's voices asking for the wrong things. With such a diversity of purpose comes some app roughness and confusion of the user in the operation of core music-serving chores. Jonathan Takiff/IDG The JBL Link Music delivered a pointed Citizen Cope missive with better clarity than the Sonos One with which it competes. Yes, it is possible to create a home network of the same platform speakers from different creators. I also had a similar size but sonically inferior (and now discontinued) Google Home and a larger but less feature-packed JBL Link 300 in the game in a multi-room test with the Link Music. But setting this up was a balky process that made a few attempts to create a speaker group that then collectively fire-up with a simple voice or tapped command. I have also noted that these speakers are going to sleep seriously. At startup, it can take three minutes for all three speakers to be recognized and accessed on the app's screen, with the Google Assistant apologizing hmmm... Something went wrong. Try again in a few seconds. (At least the platform recognized a failure and proactively fixed it.) In my busy wi-fi environment at home, the JBL Link Music sometimes suffered from a ghosts-in-the-machine sputtering sound that could last from a few seconds to even a full song. This signal interference problem was more common when trying to stream a multi-speaker group. Rebooting and restricting the show to just the JBL Link Music speaker has corrected the display of Bob Dylan's aptly named New Rough and Rowdy Ways on Google Play Music. I think two or more matched Link Music speakers would probably be handshake and work better together than a rag-tag assembly of new and old speakers. JBL JBL Link Music sounds amazingly good for the retail price. When the stars aligned, the Link Music kindly recalled how I had previously worked on the program: Returning to a pre-selected speaker group and music, and playing in perfect synch with speakers in adjoining rooms or even a floor or two away. More of a pisser is the lack of a simple access menu in the Google Home app for browsing, discovering and selecting music content, as I've learned to rely on the obsessively entertainment-focused apps for Sonos and Bose smart speakers. That's less of a problem if you know what you want to hear and have subscriptions the right services. With a Link Music speaker, you can verbally request free and paid versions of Google Play Music, YouTube Music, Spotify and Pandora, plus subscription-based Deezer, SiriusXM and Apple Music. Tune-In is the default aggregate/search engine for free internet radio stations on the Music speaker (don't miss our complete internet radio guide), and it worked even more accurately with Google Voice Assistant than Alexa (on other speakers) in understanding my Philly-accented requests. Several other music services I like were not selectable through Google Home: Amazon Music, Napster, Qobuz and Tidal. But I can remotely browse, select and stream it to the JBL speaker from my Chromecast smartphone, Apple AirPlay 2, Bluetooth 4.2. I had the best experience with Chromecast, which - frankly - really is to pick up and cast the selected content from the cloud, rather than from the user's phone. So yes, I had some problems with the JBL Link Music smart speaker, although some were of my own making - because I've learned to demand a lot from much more polished, pricey, carefully integrated multi-room smart speaker systems. With expectations more modest, the smallest Link should keep you very entertained. Note: If you buy something after clicking on links in our articles, we can earn a small commission.
